Bio-Living Cell (BLC) Therapy is a breakthrough in the aesthetic and health industry. This therapy optimizes the natural body repair system by penetrating a serum rich in hyaluronic acid and other proteins using the iontophoresis system.

Protein and hyaluronic acid are essential substances required for cell regeneration to take place in the body. Iontophoresis is a technique which uses ions system that penetrates the serum deep into the body with MINIMAL SIDE EFFECTS.

Therefore, the smart combination of the serum with iontophoresis system creates a non-invasive yet powerful technique with the ability to regrow, repair and replace damaged tissues such as skin, hair, etc. This is why BLC Therapy is able to overcome a wide range of skin, hair and health issues simultaneously.
B.L.C. therapy has been proven to be able to help overcome various health problems and is suitable for both the young and the old. Through the combination of protein-rich serum, hyaluronic acid and ionthophorosis, B.L.C. Therapy can stimulate new cell regeneration to repair, replace and regrow damaged tissues in the body system.

“...I’ve had eczema ever since I was two years old. At some point in my teenage years, my condition worsened and the use of steroid cream didn’t seem to help. I also realised that the prolonged use of it caused a decline in bone density, making me weak and my bone vulnerable fractures. Because of this, I decided to stop using it but the oozing lesions worsened and my skin itched and felt like they were burning. After intensive BLC treatments, my skin is now healthy (free from steroids) and I have noticed growth and improvement in my body that I’ve never experienced or seen before.

— Mr. W —
B.L.C. therapy is the solution for a variety of skin problems including acne, pigmentation and scar issues. This is because the B.L.C. therapy directly approaches the initial cause of the problem of skin damage. This therapy combines iontophoresis system with serum rich in hyaluronic acid and protein to stimulate skin cell & tissue regeneration.

Simultaneously, B.L.C. Therapy also improve blood circulation, stimulate the production of skin’s collagen and new skin cell regeneration, which result in a healthy glowing and supple skin.

The results gained through B.L.C. therapy is outstanding. It is achieved WITHOUT SURGERY, INJECTIONS OR LASER and certainly MINIMAL SIDE EFFECTS.

- **SERUM**: Contains hyaluronic acid, collagen and growth factor which are needed for cell regeneration
  - Stimulate growth of new skin
  - Detox
  - No downtime & Minimal side effect
  - Improves blood flow for healthy glow skin

- **HUMAN’s ION SYSTEM**: Non-invasive way to penetrate the serum

**FULL REJUVENATION**

**NO LASER**

**NO SURGERY**

**NO INJECTION**
